

SQL Data Analysis Report

Objective :

To create a student Management database , insert student records , and perform SQL queries for data analysis.

Database Created :

StudentManagement

Table Created :

Students

Fields :

Stdid (primary key) auto-increment , name , gender , age , grade , mathScore , scienceScore , englishScore

Data Inserted :

10 student records with different grades , genders , ages and subject scores.

Queries Performed :

1. Show all student details
 - Displays all records from the Students table .
2. Average score in each subject
 - Calculates the average marks in Math , Science and English .
3. Top performer
 - Finds the student with the highest total score .
4. Count students per grade
 - Displays the number of students in each grade .
5. Average score by gender
 - Shows the average marks of male and female students .
6. Students with Math score > 80
 - Lists students who scored more than 80 in Mathematics .
7. Update a student's grade
 - Updates the grade of name = 'Priya' from B to A and verifies the change .

Conclusion :

The Student Management database was successfully created , populated with sample data and analyzed using SQL queries including SELECT , AVG , GROUP BY , WHERE , ORDER BY and UPDATE . This demonstrates basic SQL database management and data analysis operations.
